

## NAVIGATING THE WAY TO GREENER COMMUTES

This immersive and engaging game challenges players to make environmentally conscious commuting choices. This is done while navigating through various scenarios and challenges.

It revolves around strategic decision-making and planning, as players must choose between eco-friendly modes of transportation such as walking, biking, carpooling, vanpooling or using public transit. Telework counts as well!

Each decision affects the player's progress and environmental impact. Players will move forward along the road, aiming to achieve green commuting objectives throughout the month of May. They can achieve badges as they inch closer to end goal.

## DIRECTIONS

Choose your mode, add your name, and begin. Move daily!

**Goal:** to see how far down the roadway you can get.

**Bonus points to anyone who achieves the 23 day level for the month.**

A construction barrier means you must stop and do one of the following before proceeding:

- Register your account and/or log into your company's network on Share the Ride Idaho.
- Log a week of green commutes
- Participate in a May in Motion event
